**Meaningful Use Automated Measures Report**

The Meaningful Use Automated Measures Report (AMR) allows a provider to track which Measures have been met and which Measures have not been met. The report displays the numerator, denominator, percentage of the criteria the provider has met, and the threshold required to meet the measure. The “Met” column indicates whether or not the Measure has been met. Additional resources such as non-compliant reports and training documents are also accessible from the AMR.

<tbody>
<tr>
<td>1. Log into OP15. From your homepage, click the workbar. The Reports workbar will expand with a list of reports, see Image 1. Click “Meaningful Use – Automated Measures Report” (AMR).</td>
<td>![Image 1]</td>
</tr>
<tr>
<td>2. The AMR displays in the right-hand pane of the application window, Image 2. Choose the Provider in the Provider field (if the provider is logged in, their name will be automatically populated). Choose the Stage (note that all EPs regardless of the starting year will be required to meet the Objectives contained within Modified Stage Two, The Reporting Period dates are set by an Application Key in System Administration. Please contact support if you need to modify these dates.</td>
<td>![Image 2]</td>
</tr>
</tbody>
</table>
3. The AMR displays the following, see Image 3:

1) The numerator, denominator, quantity of nonconforming patients, the percentage of the criteria the Provider has met, and the threshold required to meet the Measure are displayed.

2) The “Met” column indicates whether or not the Measure has been met by the selected Provider.

3) Clicking the Measure Name will display the associated training document for that Measure.

4) Clicking a quantity (other than “0”) will display a list of patients who are not meeting the requirements of the selected Measure.

Image 3

**NOTE** Please be sure to monitor this report throughout your reporting period to ensure compliance with the Measures for each Objective required by Modified Stage Two of Meaningful Use.

**NOTE** It is recommended that the practice download and/or print the report used at the time of the attestation and save it in your files in case of a CMS audit.
4. The Nonconformance report for the selected Measure will display; see Image 4.

Based on the requirements of the Measure, varying information will be displayed to assist you with troubleshooting why you have not met the Measure for the patients listed.

Under the Patients column, you can click a patient’s name to open their Chart and take any necessary actions to resolve the reason for noncompliance.

The bottom of the report includes buttons to toggle between multiple pages, if needed. In the lower right corner, you will see an indication of the number of items displayed on the current page.

**Image 4**

- Combined with the information contained within the training documentation for the Measure (see step 3), you will be armed with the information you need to ensure that you are meeting the Measures for each Objectives required by Modified Stage Two of Meaningful Use.

- Depending on the selected Measure, you may see a patient listed more than once. This is because some Measures are looking for the total number of encounters, prescriptions, orders, etc. Each time a patient is listed indicates a different instance of noncompliance with the selected Measure.
